

Overview

The provided document is a partial question paper for Standard 7 Science, specifically Chapter 10 (Electric Current and its Effects). It is dated 18-02-2026 and has a total of 30 marks. The paper includes multiple-choice questions, one-sentence answer questions, fill-in-the-blanks, short answer questions, and a section for drawing circuit symbols.

Extract MCQs

01. The coil of wire contained in an electric heater is known as:

- A. Component
- B. Element
- C. Circuit
- D. Spring

Ans. (B)

02. The device used to make or break an an electric circuit is:

- A. Resistor.
- B. Battery.
- C. Switch.
- D. Ammeter.

Ans. (C)

03. Coils of heating devices are made up of:

- A. Mercury
- B. Nichrome
- C. Copper
- D. Tungsten

Ans. (B)

04. When an electric current passes through a solenoid, it acts as a/ an:

- A. Insulator.
- B. Electric bell.
- C. Resistor.
- D. Bar magnet.

Ans. (D)

05. Current flows through the circuit when the circuit is in the _____ condition.

- A. Closed.
- B. Open.
- C. Broken.
- D. Incomplete.

Ans. (A)
